VermineX assures with the best in class Pest Management Service if opportunity comes up and guarantees that its professionalism will meet your requirement.

FLEXIBLE SOLUTIONS FOR YOUR PEST PROBLEMS

INTEGRATED PEST MANAGEMENT PROVIDES A TOTAL END TO END SOLUTION

What is Integrated Pest Management (IPM)?

Integrated Pest Management (IPM), is not a new approach in structural pest management. In fact, **IPM** has been practiced in structural pest management for many years. **IPM** is a process that considers all available information and control methods when managing Pest populations. When using an **IPM** approach, Pest populations are maintained below economically damaging or socially unacceptable levels. All practical measures to suppress the Pest population to a tolerable level are considered: These include cultural controls (e.g., changes in maintenance practices, regular cleaning schedule, garbage elimination, changes in worker procedures) Pest exclusion, physical modifications (e.g., screening, caulking, etc.), pest control devices and pesticides. Using a combination of these cultural, physical, biological and chemical control techniques to minimize adverse effects to the public or the environment.

We are strictly following the **(IPM)** Integrated Pest Management program for the successful eradication of Pest and Vector issues. As everybody is well aware Hygiene, Pest Management, Germ Annihilation and Public Health Management course are the key mark for flourishing any business in now a day. Since the world prefers, systematic as well as professional style of business approach, the multinational companies along with the newly budded entrepreneurs are also constrained to focus on the quality and value added service to sustain in the market for existence. Our commitments to providing the highest quality service at a fair price have earned us the reputation of being a true industry in **Qatar**.

VermineX is giving more emphases on standard service execution compiling with the internationally recognized **IPM** (Integrated Pest Management) method and direction to minimize and control the existing pest oriented problems in all facilities. So we are dedicated our self to spare guaranteed at the same time effective **IPM** around the clock to satisfy our clients and keep the business relationship more solid and strong. Hence **VermineX** differentiate our service from just broad spread chemical application to systematic inspection in every nuke and corner of the property and identify the target pest. So **VermineX** is aimed to render the remedial treatment method only such target pests so as to create no harm either to human being or the environment. More over keen interest is also provided in evaluating sanitation and proofing standards. So **VermineX** carries out the operation to achieve this goal. **VermineX** will also provide Food Hygiene Training Program, **HACCP & ISO 22000** consulting & Certificates approved by the **U.K** Based standardizing agency for the food handling institutions on demand. For achieving and processing such classification you can contact our department in charge for more details and further information.

- ❖ FLY STRIP INSTALLATION
- ❖ EMERGENCY CALL BACK SERVICE

SANITATION AND PROOFING

Sanitation is a key component to the success of any **IPM** program. The structural pest control applicator must educate the client on the importance of maintaining a high level of cleanliness both inside and outside a structure. By maintaining a clean environment, pests may be eliminated. Sanitation practices may include routine and “special” cleaning, review and improvement of waste management practices and management or packing materials such as cardboard boxes.

Before **Verminex** carries out the service in any property we have to make sure that the facility is properly ready for undertaken our Pest Control Services. Sanitation is the most significant potential to keep the property free from any pest infestation and sound harborage. Hence **Verminex** gives more firm direction to uphold the environmentally hygienic condition in all-weather as well as throughout the year. Similarly, **Verminex** will personally organize with you to undertake an overall evaluation about the potential sanitation threats in all sensitive locations especially the food handling areas.

Waste Management Program is also a very seriously considered matter and a professional approach need to be arranged for the disposal and removing on a regular interval, especially the unwanted food as well as non-food stuffs. Reviewing the housekeeping activities, a planned schedule is recommended to keep up the property as a pest free zone. Unless serious precautions given to pest harborage and hatching will be multiplied within a due course. Housekeeping activities need to be intensified in all hidden and unattended areas otherwise the dark and undisturbed places will surely provide conducive condition for the nuisance pests to thrive on.

Similarly, addition serious attentions also need to be given to those hidden and inconspicuous locations, which are not regularly used. **Verminex** will give you strict recommendations for proofing activities and on a war footing priority these suggestions need to be rectified to uphold the facility free from all pest intrusion.

OUR CERTIFICATIONS

GENERAL PEST ABATEMENT

We spotlight on the target pests like rodent (Rat and Mice), crawling insects like (Cockroaches, Ants, Spiders, Scorpion etc.), Bed bugs, Flies, Mosquitoes, etc. and execute our professional style of treatment for the abolition of the threat. Residual insecticides treatment will be carried out and is highly effective in the eradication of vermin's, immigrant's insects and the successive generation. One application will remain for a long period to months, therefore killing insects that come into contact with the treated surfaces (e.g. Roaches, Ants, Bugs, etc.). Odor & Odorless chemical will be used for this propose. Gel application also will be done for sensitive areas.

RODENT ABATEMENT

VermineX will make available Bait stations on demand to extrude the threat of Rat and Mice from your facility. The exterior perimeter of the facility shall be placed with steel or metal traps, and microencapsulated baits etc. to avoid the entry of the rodents into the facility. We will give site map and the action plan for the abolition of rodent issue from your property. On the light of the inspection we shall place microencapsulated baits as well as the glue traps, pads, stickers etc. to eliminate the rodent issue from your properly. Similarly, if any rat is either trapped or found dead after consuming the baits we will be so vigilant to replace the taps and remove the dangerous pest from your facility the same day itself. Our systematic operation is going in an unbreakable style. Tamper resistant bait stations shall be positioned as per the recommended distance and secured them with location map for monitoring and replacing them on an easy manner. Similarly, an inspection tag or sticker also attached with them for making sure the nest regular visit easier.

HEALTH & SAFETY POLICY

VermineX gives prior focus on safety matters since our crew is handling with poison materials. A good number of safety precautions are adopted to avoid the danger. Proper Personnel Protective Equipment (PPE) is using to safeguard the applicators and serious care is given on the sensitive areas so as to avoid any disaster. Before and after the treatment our crew is so attentive to pass proper direction to the inmates and the individuals what to do and what need to be avoided. Regarding the usage chemical **VermineX** is firmly following the direction of the label instructions and while disposing the used empty can also much care is exercised to get rid of the waste stuff in the proper as well as recommended path. Since the technicians have attended orientation course they are well informed with the protocol what to do and how to manage the hazards substance.

Since the technicians have attended orientation course they are well informed with the protocol what to do and how to manage the hazards substance.

CLIENT EDUCATION AND COMMUNICATION

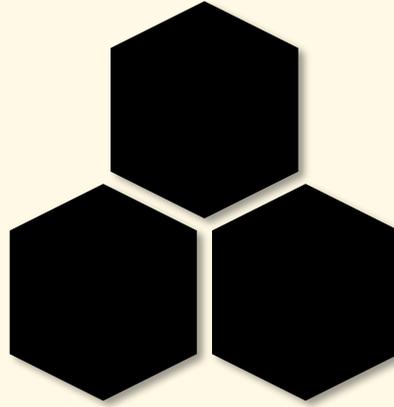

Good communication between the Pest control operator and the client is extremely important to the success of the IPM program. Communication must be an ongoing activity involving training, education and a routine review of the goals of the pest control program.

EMERGENCY & CALL BACK SERVICE (24 X 7)

If any unsatisfactorily result either noticed or notified **VermineX** do shall render our remedial treatment on the same day itself and it is purely by free of charge. This can be arranged by contacting our emergency or hot numbers around the clock. The customer has the right to feel free to contact us for this voluntary service.

A NOTE ON PESTICIDE RESISTANCE:

Repeated applications of the same pesticide or chemically similar pesticides over time can lead to the buildup of resistance. When this occurs the most complete application cannot achieve acceptable control. With repeated applications after population recovery, the more susceptible individuals are killed and those that are less susceptible become the parents of the next generation. Alternating pesticides with different modes of action (E.g., organophosphates and pyrethroids) and of different types (e.g. baits) can also be helpful. Of the urban Pests, the house fly and the German cockroach lead in the development of resistance to pesticides. The use of an integrated approach to pest management reduces reliance on individual pesticides can help slow or prevent the development of resistant pest populations.
